About Me

Software Engineer with 2.5 years of experience in Java Enterprise applications in the service industry, including key deployments for client Entertainment Partners. Proven expertise in building scalable Microservices using Spring Boot, Hibernate, and Drools Rule Engine to drive business logic automation. Proficient in optimizing data access layers and solving challenges. Leveraging modern workflows via IntelliJ IDEA and Tabnine AI to deliver clean, accelerated code while continuously expanding capabilities in Full-Stack frameworks and Machine Learning systems.

Skills

- **Core & Backend Technologies**: Java, Spring Boot, Hibernate, Microservices, Drools Rule Engine
- **Web & UI Frameworks**: Angular 6+, React.js, HTML5, CSS3, Tailwind CSS
- **Databases & Storage**: PostgreSQL, MySQL, MongoDB
- **AI & Advanced Tech**: Python, Retrieval-Augmented Generation (RAG)
- **DevOps & Cloud Integration**: AWS (Amazon Web Services), Jenkins, Spinnaker, Git, GitHub
- **Monitoring & Quality Tools**: Kibana (ELK Stack), SonarQube, Postman
- **IDEs & Productivity**: IntelliJ IDEA, Eclipse, Spring Tool Suite (STS), VS Code, Tabnine (AI Assistant)

Experience

Sutherland Global Services (formerly ATMECS Global Inc.) Hyderabad, Telangana

Software Engineer - Backend Developer May 2024 – October 2026

Entertainment Partner(EP) Payroll System: Developed scalable Spring Boot REST APIs and leveraged the Drools Rule Engine to automate complex multi-union compensation logic (Overtime, Bonus, Rest periods). Served as the primary technical contact for the engine, managing zero-downtime CI/CD deployments via Jenkins/Spinnaker, and resolving 70+ production tickets within strict client SLAs.

SmartDoc Analytics Platform: Enhanced a modular document processing platform by building responsive UI pages with Angular 6+ and integrating AI-driven Retrieval-Augmented Generation (RAG) components to transform unstructured labor contracts into structured rule sets. Accelerated engineering velocity using Tabnine AI for refactoring and JUnit generation, earning a client **Bravo Award**.

Key Responsibilites

- **Backend & Architecture:** Designed and developed scalable RESTful APIs using Java, Spring Boot, and Hibernate, using the Drools Rule Engine to implement complex Rest period, Overtime, and Bonus business logic.
- **Full-Stack Integration:** Developed responsive UI pages using Angular 6+ and collaborated cross-functionally between offshore / offshore stakeholders to align client business requirements with final module deliveries.
- **Product Ownership & Support:** Served as the primary technical contact for a new Payroll Processing Engine, resolving 30+ core production issues and maintaining strict SLAs across 70+ support tickets on a rotational basis.
- **DevOps & CI/CD Pipeline Management:** Managed robust multi-environment application deployments using Jenkins and Spinnaker, ensuring consistent, zero-downtime production releases and post-release validation.
- **Engineering Quality & Recognition:** Honored with a client **Bravo Award** for project contributions; optimized engineering workflows by conducting code reviews and generating comprehensive JUnit test cases accelerated by Tabnine AI.

Education

C-DAC ACTS 2023 – 2024

PG-Diploma in Advanced Computing

DES's Fergusson College, Pune 2018 – 2020

M.Sc. in Physics
